

AppSheet User Access Audit & SOP Remediation

Diagnostic & Escalation Report for Khaled's Orbit User Account Access Issue

AFFECTED USER	APPLICATION	INCIDENT DATE	REPORT STATUS
Khaled	BLR World Orbit	28 July 2026	Escalated to People Admin

1. EXECUTIVE SUMMARY & SYMPTOM ANALYSIS

An operational issue was reported regarding **Khaled's ORBIT account**, where the *Clock In / Clock Out* action and sidebar modules were not visible upon logging into the application. The user was only able to view the **Resources** section.

Diagnostic Finding: When an AppSheet user in the Orbit application only sees the Resources module on the sidebar and lacks attendance/clock-in controls, it explicitly confirms that the user account lacks the **Employee** role / access mapping in the AppUser control table.

2. CHRONOLOGICAL LOG & RESOLUTION WORKFLOW

- 28 July 2026 - Client Inquiry

Issue Reported via Support Channel
Client queried why the Clock In/Out option was not appearing on Khaled's account.
- 28 July 2026 - Technical Diagnosis

Sidebar Visibility & Permission Audit
Analyzed UI state (user limited strictly to Resources view). Identified missing Employee record/mapping in the AppUser table.
- 28 July 2026 - Escalation to People Admin

SOP Workflow Initiated
Escalated to **Rizalyn Bolasco** (People Admin) to execute the Standard Operating Procedure for User Creation in AppSheet.

3. STANDARD OPERATING PROCEDURE (SOP) REMEDIATION CHECKLIST

To resolve the missing Clock In/Out functionality and grant proper employee permissions, the People Admin must perform the following standard multi-tier updates:

LEVEL	TARGET COMPONENT	ACTION REQUIRED
1. Google Sheets Level	Employee / AppUser Master Data Sheet	Ensure physical row exists for Khaled with valid email address, role, and department.
2. AppSheet Level	AppUser Table Regenerate	Trigger data sync or process flow to link the authenticated email ID to the Employee ID.
3. Column Type Level	Ref Configuration	Verify Ref relationship between AppUser and Employee table to prevent invalid dereference errors.
4. View & UX Level	Clock In / Out Action Buttons	Confirm slice conditions evaluate USEREMAIL () against active Employee records.

Action Item for People Admin (Rizalyn Bolasco): Follow the *User Creation SOP* to complete Khaled's employee onboarding record and trigger the CreateAppUserID workflow in AppSheet.
